Allowable Subject Matter

1. Claims 1-10 contain allowable subject matter over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

The claimed invention is directed to a frame number detecting device. The independent claim identifies the feature of "the state detecting means which causes a state variable to vary on the basis of the result of comparison made by comparing the value of the number of the frame read by a frame number detecting means and the value of the count number of the first counter to see whether the values agree with each other, wherein when said state variable satisfies a given condition, said state detecting means causes the first counter to change the value of the count number to the value of the number of the frame read by the frame number detecting means without incrementing said count number, and when said state variable satisfies another given condition, said state detecting means causes said second counter to change the value of said count number to the value of said count number of the first counter without incrementing said count number, and wherein said frame number detecting device outputs the value of the count number of said second counter as said number of said frame". The closest prior art, "Japanese Patent # 11176081" discloses a conventional frame number detection device, either singularly or in combination fails to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

McGee et al discloses significant scene detection and frame filtering for a visual indexing system using dynamic threshold.

Takayama et al discloses paging receiver, which performs data communication protocol analysis through execution of control program.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bob Chevalier whose telephone number is 703-305-4780. The examiner can normally be reached on MM-F (9:00-6:30), second Monday off.
